

Dr. Bonnie Westra is an Assistant Professor in the School of Nursing at the University of Minnesota and co-chairs the Alliance for Nursing Informatics. She developed and coordinates the nursing informatics specialty for the Doctor of Nursing Practice (DNP) program. She has 20 years experience with development, implementation and research using nursing and other standardized vocabularies and data sets. She designed an electronic health record (EHR) integrating standardized terminology for use in home care, hospice, and public health. She has been involved with multiple nursing terminologies over the past 20 years. Dr. Westra is co-director for the University of Minnesota International Classification of Nursing Practice (ICNP) Center for Nursing Minimum Data Sets and Knowledge Discovery, which is an International Council of Nursing Practice research and development center. She collaborates on research teams using data mining and natural language processing analytic techniques to understand the effective use of nursing vocabularies reusing EHR data.
