

Electronic Health Information

Secure. Private. Accessible.

Oops – this wasn't part of today's plan!

Neither was remembering your primary physician's phone number, your current medications or your list of allergies. Not to worry if your physician is using Electronic Health Records (EHRs). What is an EHR? It is a computerized version of your medical data. Many physicians across Georgia are in the process of converting traditional paper records to EHRs. By using EHRs, your medical information is electronically stored and can be shared by physicians treating you. Also, EHRs offer many other benefits, including greater security and privacy than paper records.

Learn more about the security and privacy of EHRs by logging onto georgiahealthinfo.gov and clicking the **Health Information Security and Privacy** box on the Home Page.
